Q.1 Write the complete **Business Process** and **Detailed Use Cases** add client, add product, add product to client's wishlist, and for all the queries needed to test these.

Business Process:

Detailed Use Cases:

Use Case 1: Add Client

Actor: System Administrator / Client Service Representative

Preconditions: The operator is authenticated and authorized to manage client accounts.

Postconditions: A new client record is permanently saved in the system with a unique identifier.

Basic Flow:

1. The actor triggers the "Add Client" function.
2. The system requests the client's details: **First Name**, **Last Name**, **Email**, and **Phone Number**.
3. The actor enters the requested information.

4. The system validates the input format (e.g., proper email structure, unique email address).
5. The system generates a unique **ClientID**, stores the record, and displays a success confirmation.

Use Case 2: Add Product

Actor: Inventory Manager / Content Catalog Editor

Preconditions: The actor has access to the product catalog management panel.

Postconditions: The product is created and made available for clients to browse and add to wishlists.

Basic Flow:

1. The actor initiates the "Add Product" process.
2. The system prompts for product information: **Product Name**, **SKU**, **Price**, and **Category**.
3. The actor submits the product details.
4. The system validates that the **SKU** is unique and the price is a positive number.
5. The system creates a unique **ProductID**, commits the entry to the catalog, and confirms success.

Use Case 3: Add Product to Client's Wishlist

Actor: Client / Customer Support Agent (on behalf of client)

Preconditions: The client profile exists, and the target product is active in the catalog.

Postconditions: A link is established between the client and the product, timestamped for tracking.

Basic Flow:

1. The actor selects a specific product while viewing a client profile or session.
2. The actor triggers the "Add to Wishlist" command.
3. The system verifies that both the **ClientID** and **ProductID** are valid.
4. The system checks if the product is already on the client's wishlist.
5. The system creates a new wishlist entry combining the **ClientID**, **ProductID**, and **AddedDate**.
